Ordinance: 3134

25. The determination of Building permit fees, plan review fees and valuation of construction is as follows:

a. Building permit fees and plan review fees are established by resolution passed by the City Commission after public hearing. The determination of value or valuation under any of the provisions of this title is made by the building official.

b. The value to be used in computing the building permit and building plan review fees is the total estimated cost of all construction work for which the permit is issued as well as all finish work, painting, roofing, electrical, plumbing, heating, air conditioning, elevators, fire-extinguishing systems and any other permanent equipment. The value or valuation of a building or structure under any of the provisions of this title is the greater of the construction cost estimated by the owner or the owners agent, or the cost per square foot method of valuation and the cost per square foot figures for the type and quality of construction listed in the most current "Building Valuation Data" table published by the International Code Council (ICC) in the "Building Safety Journal" magazine, as regionally modified.

c. The building and safety division may base the building permit fee and plan review fee on the best available valuation information when unusual circumstances make the above methods unreasonable.
